

Integrated ERP-Centric Digital Transformation Solutions

Aligning technology with real operational workflows for complex, high-demand environments.

1- Company Overview

OctaTech is a technology solutions company specializing in ERP-centric digital transformation for organizations operating in high-complexity environments.

We design and deliver integrated platforms where ERP systems act as the operational backbone, seamlessly connected to infrastructure, cloud services, IoT devices, access control systems, and cybersecurity layers. Our approach focuses on aligning technology with real operational workflows, ensuring systems are not only functional but also measurably effective.

MISSION

To design, implement, and support ERP ERP-driven technology ecoystems that connect business with processes with infrasfucture, and people—delivering operational, efficiency, and resilience

VISION

To empower organizations with intelligent, secure, and integrated platforms that tranbform how a operations managed and controled

Core Areas of Expertise

ERP for Complex Industries We design customized ERP environments handling advanced manufacturing logic, multi-stage costing, and compliance requirements.

ERP, IoT & Access Integration Bridging digital systems and physical operations with ERP-driven gates, RF bracelets, and real-time operational monitoring.

Network & Cloud Solutions Enterprise-grade LAN, WAN, satellite-based network (Inmarsat's BGAN) and Wi-Fi design, combined with high-availability cloud and hybrid infrastructure architectures.

Cybersecurity & Protection Security embedded into every solution, focusing on secure identity architecture, data encryption, and audit controls.

BMS & Facility Integration Integrating facility systems with ERP platforms to enable centralized control, surveillance, and unified operational visibility.

Vision & Mission Empowering organizations with intelligent, secure, and integrated platforms that transform operational management and control.

Industries We Serve

OctaTech serves entities requiring robust, scalable, and tightly integrated systems across various demanding sectors.

Manufacturing

Gold, Food & Beverage, and Industrial environments with complex operational logic.

Government

Public sector entities requiring secure workflow analysis and infrastructure specifications.

Healthcare

Hospitals and clinics needing ERP-based patient workflows and queue management.

Hospitality

Resorts and waterparks requiring ERP-driven access control and ticketing systems.

The OctaTech team brings extensive hands-on experience delivering solutions across diverse and demanding environments.

Education

Implementing infrastructure, payroll, and HR systems for universities.

Retail

RF-based production tracking integrated with ERP and cloud platforms for retail brands.

Why OctaTech

OctaTech offers an ERP-first, operation-driven approach with proven capability in high-complexity environments. We provide deep integration between software systems and physical operations, maintaining a strong balance between business understanding and technical execution through a vendor-neutral, solution-focused methodology.

Experience & Delivery Capability

The OctaTech team brings extensive hands-on experience delivering technology solutions across diverse and demanding environments, including:

- **University and educational institutions:** infrastructure, payroll, and HR systems
- **Large recreational and waterpark facilities:** ERP-driven access control, RF ticketing, POS, inventory, CRM, and operational monitoring
- **Manufacturing organizations:** ERP-based production, costing, waste tracking, and inventory control
- **Food & beverage chains:** multi-branch infrastructure, POS, manufacturing, and cost control
- **Healthcare facilities:** ERP-based appointment scheduling, queue management, session handling, and patient workflows
- **Government entities:** workflow analysis and preparation of technical and infrastructure specifications
- **Remote and satellite environments:** VOIP and data infrastructure
- **Enterprise email and cloud platforms:** large-scale hosting and mail systems
- **Retail manufacturing brands:** RF-based production tracking integrated with ERP and cloud platforms
